## Key Features

• Download data from any controller currently or previously connected to WebAdvantage;

• Import data into your own Database for advanced tracking and trending;

• Secure (HTTPS) and private API connection from WebAdvantage to your database;

• Cost effective data management.

Application

WebAdvantage API provides the ability to pull down historical data from WebAdvantage connected controllers. This data may be imported to your own database or shared. We will provide you with the information and data needed to make the connection and pull data. WebAdvantage API is an API "Pull" only with no API data pushes allowed and the user must provide their own data gather code from the API.

This system ensures that you can easily and securely integrate all datalogging from our controllers into your own online platform!
